Languages: Python, Java, JavaScript, HTML/CSS, C, C#, Bash, SQL, MSSQL, PL/SQL

Web Dev: React, Django, REST & GraphQL APIs, Stripe webhooks, third-party API integration, JWT authentication

Security/Systems: Linux server hardening, HTTPS/TLS, Firewall/iptables, VM provisioning, Unix permissions

DevOps: Git, SSH, AWS, Google Cloud Console, secret handling, systemctl, Redis, Celery, NGINX/APACHE, Docker

Projects

<https://reedtodigest.com>

(personal project)

Full-stack ecommerce site

Sept. 2025 – Oct. 2025

React · Django · Docker · Nginx · Stripe

- Built and deployed a full-stack web application using Django for the backend REST API and React for the mobile-responsive frontend UI.
- Deployed using Docker Compose within a hardened Linux VM which itself is hosted using a Linode VPC.
- The site employs a Nginx server – to handle HTTPS traffic along with a Reverse Proxy to a WSGI server which handles the backend API.

(personal project)

Full-stack NBA content/analytics site

Dec. 2024 – Feb 2025

GraphQL · React · Celery · Redis · Nginx · Django

- Data-intensive, NBA website – including league standings, league leaders and detailed pages for each team and player
- Backend API was developed with GraphQL and makes use of Celery task manager to schedule real-time updates.
- Nginx server includes multiple backend pools to enable load balancing and ensure compliance with API policies.

Experience

Peak Power

Toronto, ON

Hardware Technician

Sept. 2019 – Sept. 2020

- Constructed temperature and CO2 sensors for commercial office buildings.
- Installed and tested customized sensor configurations based on numerous platforms, operating systems, and clients' needs.
- Isolated problems and fixed electronic hardware components by testing and exchanging to ensure functionality.
- Coordinated with building managers to access facilities and necessary offices while maintaining good rapport.
